

## **Aluminum Investment Casting,China Aluminum Investment Casting**

### **Manufacturers**

The materials used for Aluminum Investment Casting are a mixture of plaster of Paris, a binder and powdered silica, a refractory,Aluminum Investment Casting for low temperature melts. For higher temperature melts, sillimanite an alumina-silicate is used as a refractory, and silica is used as a binder. Depending on the fineness of the finish desired additional coatings of sillimanite and ethyl silicate may be applied. The mold thus produced can be used directly for light castings, or be reinforced by placing it in a larger container and reinforcing it more slurry.
